

Active Building RIBA Plan of Work Checklists

Version 2.0, August 2020

Introduction

This document is part of a toolkit, providing checklists at each of the RIBA Work Stages to ensure design, delivery and operation of an Active Building.

Purpose

- Provide checklists to ensure Active Building principles have been considered at each stage in the project

The document should be read in conjunction with the following documents:

- RIBA Plan of Work 2020
- Active Building Design Guide
- Active Building Code of Conduct
- Active Building Project Template
- The Active Classroom Case Study
- The Active Office Case Study
- Active Building Technology Showcase
- Planning Policy Documents
- Approved Documents

	0 Strategic Definition	1 Preparation and Briefing	2 Concept Design	3 Spatial Coordination	4 Technical Design	5 Manufacturing and Construction	6 Handover	7 Use
<p>RIBA Plan of Work 2020</p> <p>The RIBA Plan of Work organises the process of briefing, designing, delivering, maintaining, operating and using a building into eight stages. It is a framework for all disciplines and should be used solely as guidance for the preparation of detailed professional services and building contracts.</p> <p>Stage Boundaries: Stages 0-4 will generally be undertaken one after the other. Stages 4 and 5 will overlap in the Project Programme for most projects. Stage 5 commences when the contractor takes possession of the site and finishes at Practical Completion. Stage 6 starts with the handover of the building to the client immediately after Practical Completion and finishes at the end of the Defects Liability Period. Stage 7 starts concurrently with Stage 6 and lasts for the life of the building.</p> <p>Planning Note: Planning Applications are generally submitted at the end of Stage 3 and should only be submitted earlier when the threshold of information required has been met. If a Planning Application is made during Stage 3, a mid-stage gateway should be determined and it should be clear to the project team which tasks and deliverables will be required. See Overview guidance.</p> <p>Procurement: The RIBA Plan of Work is procurement neutral - See Overview guidance for a detailed discussion of how each stage might be adjusted to accommodate the requirements of the Procurement Strategy. Employer's Requirements Contractors' Proposals</p> <p>RIBA Architecture</p>	<p>Stage Outcome at the end of the stage</p> <p>The best means of achieving the Client Requirements confirmed.</p> <p>If the outcome determines that a building is the best means of achieving the Client Requirements, the client proceeds to Stage 1.</p>	<p>Project Brief approved by the client and confirmed that it can be accommodated on the site.</p>	<p>Architectural Concept approved by the client and aligned to the Project Brief.</p> <p>The brief remains 'live' during Stage 2 and is updated in response to the Architectural Concept.</p>	<p>Architectural and engineering information Spatially Coordinated.</p>	<p>All design information required to manufacture and construct the project completed.</p> <p>Stage 4 will overlap with Stage 5 (initial projects).</p>	<p>Manufacturing, construction and Commissioning completed.</p> <p>There is no design work in Stage 5 other than responding to Site Queries.</p>	<p>Building handed over, Aftercare initiated and Building Contract concluded.</p>	<p>Building used, operated and maintained efficiently.</p> <p>Stage 7 runs concurrently with Stage 6 and lasts for the life of the building.</p>
<p>Core Tasks during the stage</p> <p>Prepare Client Requirements Develop Business Case for feasible options including review of Project Risks and Project Budget Ratify option that best delivers Client Requirements Review Feedback from previous projects Undertake Site Appraisals</p> <p>Project Strategies might include: - Carbon (if applicable) - Cost - Fire Safety - Health and Safety - Inclusive Design - Planning - Plan for Use - Procurement - Sustainability</p> <p>See RIBA Plan of Work 2020 Overview for detailed guidance on Project Strategies.</p>	<p>Prepare Project Brief including Project Outcomes and Sustainability Outcomes, Quality Aspirations and Spatial Requirements Undertake Feasibility Studies Agree Project Budget Source Site Information including Site Surveys Prepare Project Programme Prepare Project Execution Plan</p>	<p>Prepare Architectural Concept incorporating Strategic Engineering requirements and aligned to Cost Plan, Project Strategies and Outline Specification Agree Project Brief Derogations Undertake Design Reviews with clients and Project Stakeholders Prepare stage Design Programme</p>	<p>Undertake Design Studies, Engineering Analysis and Cost Exercises to test Architectural Concept resulting in Spatially Coordinated design aligned to updated Cost Plan, Project Strategies and Outline Specification Initiate Change Control Procedures Prepare stage Design Programme</p>	<p>Develop architectural and engineering technical design Prepare and coordinate design team Building Systems information Prepare and integrate specialist subcontractor Building Systems information Prepare stage Design Programme</p> <p>Specialist subcontractor design are prepared and reviewed during Stage 4.</p>	<p>Finalise Site Logistics Manufacture Building Systems and construct building Monitor progress against Construction Programme Inspect Construction Quality Resolve Site Queries as required Undertake Commissioning of building Prepare Building Manual</p>	<p>Hand over building in line with Plan for Use Strategy Performance Undertake seasonal Commissioning Rectify defects Complete initial Aftercare tasks including light touch Post Occupancy Evaluation</p>	<p>Implement Facilities Management and Asset Management Undertake Post Occupancy Evaluation of building performance in use Verify Project Outcomes including Sustainability Outcomes</p> <p>Adoption of a building in the end of its useful life triggers a new Stage 0.</p>	
<p>Core Statutory Processes during the stage:</p> <p>Planning Building Regulations Health and Safety (LDM)</p>	<p>Strategic appraisal of Planning considerations</p>	<p>Source pre-application Planning Advice Initiate collation of health and safety Pre-construction Information</p>	<p>Obtain pre-application Planning Advice Agree route to Building Regulations compliance Option: submit outline Planning Application</p>	<p>Review design against Building Regulations Prepare and submit Planning Application</p> <p>See Planning Note for guidance on submitting a Planning Application (see Plan for Use Stage 3)</p>	<p>Submit Building Regulations Application Discharge pre-commencement Planning Conditions Prepare Construction Phase Plan Submit form F10 to HSE if applicable</p>	<p>Carry out Construction Phase Plan Comply with Planning Conditions related to construction</p>	<p>Comply with Planning Conditions as required</p>	<p>Comply with Planning Conditions as required</p>
<p>Procurement Route</p> <p>Traditional Design & Build 1 Stage Design & Build 2 Stage Management Contract Construction Management Contractor-led</p>								
<p>Information Exchanges at the end of the stage</p> <p>Employer's Requirements Contractors' Proposals</p>	<p>Client Requirements Business Case</p>	<p>Project Brief Feasibility Studies Site Information Project Budget Project Programme Procurement Strategy Responsibility Matrix Information Requirements</p>	<p>Project Brief Derogations Signed off Stage Report Project Strategies Outline Specification Cost Plan</p>	<p>Signed off Stage Report Project Strategies Updated Outline Specification Updated Cost Plan Planning Application</p>	<p>Manufacturing Information Construction Information Final Specifications Resolved Project Strategies Building Regulations Application</p>	<p>Building Manual including Health and Safety File and Fire Safety Information Practical Completion certificate including Defects List Asset Information</p> <p>If Verified Construction Information is required, verification tasks must be defined.</p>	<p>Feedback on Project Performance Final Certificate Feedback from light touch Post Occupancy Evaluation</p>	<p>Feedback from Post Occupancy Evaluation Updated Building Manual including Health and Safety File and Fire Safety Information as necessary</p>

<https://www.architecture.com/-/media/GatherContent/Test-resources-page/Additional-Documents/2020RIBAPlanofWorktemplatepdf.pdf>

It is always recommended to use a collaborative procurement route for Active Building projects and to bring the whole Project Delivery Team together at the earliest possible stage in the project.

0 Strategic Definition

Core Tasks: *Prepare Clients Requirements*

*Develop **Business Case** for feasible options including review of **Project Risks** and **Project Budget***

*Ratify option that best delivers **Client Requirements***

*Review **Feedback** from previous projects*

*Undertake **Site Appraisals***

Note: Tasks identified here are those specific to **Active Building** projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> Client aspirations (level of 'Active') Desire for EV charging integration Business case Whole Life Cost (WLC) considerations Site analysis - location, orientation, features Planning Policy and local vernacular Key stakeholders Project Delivery Team 	Review Active Building case studies, data and lessons learnt	
	Review Active Building Toolkit documents	
	Define Active Building requirements for project	
	Set objectives for Project Delivery Team	
	Identify key stakeholders	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	<i>The best means of achieving the Client Requirements confirmed</i>	
Active Building Outcomes for Stage 0	<ul style="list-style-type: none"> Level of Active Building agreed and written into the Project Brief for client sign off Agreement to share and publish monitoring data throughout the project, at design, construction and in use stages, to enable feedback 	
Information Exchanges	<ul style="list-style-type: none"> <i>Project Delivery Team – Active Building Toolkit</i> <i>Client Requirements – including Active Building Project Brief</i> <i>Business Case – including Active Building Business Case</i>

Further information:

1 Preparation and Briefing

Core Tasks: Prepare **Project Brief** including **Project Outcomes** and **Sustainability Outcomes, Quality Aspirations** and **Spatial Requirements**
 Undertake **Feasibility Studies**
 Agree **Project Budget**
 Source **Site Information** including **Site Surveys**
 Prepare **Project Programme**
 Prepare **Project Execution Plan**

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> Feasibility: site features, orientation, potential to site environmental features of site Existing site infrastructure available Access to local energy networks Data capabilities of local networks Data monitoring requirements Performance specifications Scope for renewable energy generation on site Types of energy storage Types of EVs anticipated for use (may be linked to building type and occupancy) 	Develop feasibility study on proposed site(s), incorporating site analysis and constraints – financial, site, other	
	Develop high level data monitoring and performance specifications	
	Arrange early stakeholder engagement sessions	
	Start photographic record	
	Utilise appropriate design tools, such as Passive House Planning Package (PHPP) and Good Homes Alliance (GHA) Overheating tool (for new homes) in early design decision making	
	Identify options for renewable energy generation	
	Identify potential energy storage technologies for heat and electricity	
	Identify potential locations for EV charging facilities	
	Identify options for linking to local and national energy networks	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	Project Brief approved by the client and confirmed that it can be accommodated on the site	
Active Building Outcomes for Stage 1	<ul style="list-style-type: none"> Client approval to develop project to be an Active Building Level of Active Building agreed 	
Information Exchanges	<ul style="list-style-type: none"> <i>Feasibility Studies</i> – including Active Building Energy Strategy & Site Analysis <i>Site Information</i> <i>Project Budget</i> – including uplift for Active Building measures and early LCC Report <i>Project Programme</i> <i>Procurement Strategy</i> – collaborative route suggested with early contractor engagement <i>Early LCA</i> <i>Responsibility Matrix</i> <i>Information Requirements</i> 	

1 Preparation and Briefing

2 Concept Design

Core Tasks: *Prepare Architectural Concept incorporating Strategic Engineering requirements and aligned to Cost Plan, Project Strategies and Outline Specification*
Agree Project Brief Derogations
Undertake Design Reviews with client and Project Stakeholders
Prepare stage Design Programme

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> • Building form factor • Site positioning • Locations of incoming services • Construction methods and materials – Life Cycle Assessment (LCA) considerations • Energy Strategy • Renewable energy generation capacity • Available generation surfaces – building and site wide • Optimum energy storage capacity • Life Cycle Costing (LCC) • Provision of green infrastructure to reduce run-off and provide biodiversity • Spatial requirements for EV charging bays, adjacent to suitable infrastructure where possible • Types of EV charging facilities required, e.g. for e-bikes, e-scooters, e-cars, e-vans, e-buses 	Develop simple massing model and initial energy model based on early design scheme(s) to determine predicted energy consumption and generation	
	Develop a report on early design(s) and recommendations for steps to enable Active Building elements	
	Prepare information to support early Life Cycle Costing (LCC) to support the aim to reduce whole life costs and to aid decision making on specifications	
	Collate information on Active Building technologies to support the Design and Access statement (DAS) for planning application	
	From site analysis, identify optimum site position for building in relation to site features and energy generation	
	Use outputs from energy model to determine optimum size of energy storage systems for both heat and electricity	
	Design for EV integration, including charging facilities, e-bike storage shelters, PV parking canopies	
	Determine electricity network connection locations and positioning of data hub	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	Architectural Concept approved by the client and aligned to the Project Brief	
Active Building Outcomes for Stage 2	<ul style="list-style-type: none"> • Active Building elements approved by client • Active Building Strategy developed 	
Information Exchanges	<ul style="list-style-type: none"> • <i>Project Brief Derogations</i> • <i>Signed off Stage Report</i> – including Active Building Assessment • <i>Project Strategies</i> • <i>Outline Specifications</i> – including Active Building technologies and early LCA considerations • <i>Cost Plan</i> – including early LCC Report • Initial massing and energy models 	

2 Concept Design

Comments:

3 Spatial Coordination

Core Tasks: Undertake **Design Studies, Engineering Analysis and Cost Exercise** to test **Architectural Concept** resulting in **Spatially Coordinated** design aligned to updated **Cost Plan, Project Strategies and Outline Specification**

Initiate **Change Control Procedures**

Prepare stage **Design Programme**

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> Energy strategy based on the reduced energy loads created through building fabric and passive design Renewable energy strategy – is it possible to generate more than consumed? Can the building form be adapted to increase generation surfaces if needed? Spatial requirements for energy storage systems and their integration with equipment used for heating, ventilation, cooling, vertical circulation, lighting and small power Spatial requirements and landscape features associated with EVs Spatial and power requirements for data monitoring and communication systems 	Use evidence from concept model to determine options for renewable energy generation technologies	
	Identify predicted energy loads versus generation capacity	
	Develop an energy strategy	
	Develop performance specifications for an Active Building	
	Undertake early LCA and LCC	
	Design for adaptability – spatial and building services	
	Establish potential energy generation sources and capacity of energy storage required. Determine spatial requirements, including ancillary equipment (such as inverters, charge controllers, meters). Consider access to energy storage for ongoing maintenance	
	Determine number and type of EV charging facilities required depending on client aspirations and building occupancy	
	Start developing software to enable communication between the BMS and the grid to enable smart export and import regimes to be implemented	
	Ensure tendering contractors understand Active Building concepts and how to achieve Active Building requirements	
Ensure Active Building are included in all contractual documents related to the Active Building project		
Stage Outcome	<i>Architectural and engineering information Spatially Coordinated</i>	
Active Building Outcomes for Stage 3	<ul style="list-style-type: none"> Active Building technologies incorporated 	
Information Exchanges	<ul style="list-style-type: none"> <i>Signed off Stage Report</i> <i>Project Strategies</i> <i>Updated Outline Specifications</i> - including Active Building technologies <i>Updated Cost Plan</i> <i>Planning Application</i> – including Active Building Energy Strategy 	

3 Spatial Coordination

4 Technical Design

Core Tasks: *Develop architectural and engineering technical design*

*Prepare and coordinate design team **Building Systems** information*

*Prepare and integrate specialist subcontractor **Building Systems** information*

*Prepare stage **Design Programme***

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> • Specification of materials – LCA considerations • Form of construction • Use of local resources • Specifications of technologies and systems • Specifications of energy generation technologies and assessment of their compatibility with other building services • Specifications of energy storage systems and their integration with the energy strategy and equipment used for heating, ventilation, cooling, vertical circulation, lighting and small power • Specifications of EV charging facilities • Specifications of communication and monitoring systems 	Develop detailed building physics/dynamic thermal model	
	Review design information and Mechanical, Electrical and Plumbing (MEP) strategy	
	Review technical specifications developed to ensure Active Building technologies included – assess equipment required to suit the energy generation and storage, and incorporate into the energy strategy.	
	Consider most appropriate types of energy storage (heat and electrical)	
	Review specifications against LCA and LCC criteria	
	Develop data monitoring specifications	
	Ensure use of Active Building naming schema for BMS	
	Develop a control strategy for EV integration into the BMS	
	Specify control systems to enable controlled interaction of energy with local and national grid networks	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	<i>All design information required to manufacture and construct the project completed</i>	
Active Building Outcomes for Stage 4	<ul style="list-style-type: none"> • All information on Active Building technologies incorporated into design information • Active Building data monitoring specifications developed 	
Information Exchanges	<ul style="list-style-type: none"> • <i>Manufacturing Information</i> • <i>Construction Information</i> • <i>Final Specifications</i> – including Active Building Data Monitoring Specification • <i>Residual Project Strategies</i> • <i>Building Regulations Application</i> • Active Building Report based on energy modelling • Active Building Information Pack for toolbox talks

5 Manufacturing and Construction

Core Tasks: *Finalise Site Logistics*

*Manufacture **Building Systems** and construct building*

*Monitor progress against **Construction Programme***

*Inspect **Construction Quality***

*Resolve **Site Queries** as required*

*Undertake **Commissioning** of building*

*Prepare **Building Material***

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> Thermal performance of fabric, potential for thermal bridging and level of air-tightness Retention of low embodied carbon materials and construction techniques Use of local resources and labour where possible Correct installation and commissioning of all equipment, renewable energy technologies and energy storage systems to ensure building performs as designed Correct installation and commissioning of EV charging equipment to enable controlled charging regimes 	Deliver Active Building toolbox talks for in-factory and on-site inductions, management and commissioning	
	Undertake regular site inspections to ensure the delivery of an Active Building, including thermography and air-tightness tests	
	Document installation of technologies and equipment, including site photographs	
	Ensure BMS installer has and uses Active Building naming schema, and all necessary monitoring is in place	
	Ensure correct installation of MEP equipment aligned with Active Building philosophy	
	Ensure smart charging facilities are incorporated to enable optimised control	
	Ensure rigorous commissioning and testing to ensure all systems are performing as per the design intent, before building is signed off and handed over	
	Ensure building is connected to local and national grid networks in a manner to enable controlled import and export of energy	
<p>Ensure Active Building requirements are included in all contractual documents related to the Active Building project</p>		
Stage Outcome	<i>Manufacturing, construction and Commissioning completed</i>	
Active Building Outcomes at Stage 5	<ul style="list-style-type: none"> Active Building training completed Active Building technologies installed and commissioned 	
Information Exchanges	<ul style="list-style-type: none"> <i>Building Manual including Health and Safety File and Fire Safety Information</i> – plus information on Active Building technologies and Data Monitoring Strategy <i>Practical Completion certificate including Defects List</i> <i>Asset Information</i> 	

5 Manufacturing and Construction

6 Handover

Core Tasks: *Hand over building in line with **Plan for Use Strategy***

*Undertake review of **Project Performance***

*Undertake seasonal **Commissioning***

Rectify defects

*Complete initial **Aftercare** tasks including light touch **Post Occupancy Evaluation***

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> Information for building user manual 	Provide information for Operation & Maintenance (O & M) manuals, including detailed information on: <ul style="list-style-type: none"> the construction materials and methods building services renewable energy technologies and associated equipment energy storage systems, including instructions for shutting down the energy storage system, in the case of emergency or to undertake maintenance EV charging systems control systems monitoring regimes Include clear diagrams	
	Review the whole design and construction process with Project Delivery Team and capture lessons learnt	
	Undertake post-project review workshop with all stakeholders	
	Deliver handover workshops with building owners/occupiers/Facilities Management Team (FMT)	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	<i>Building handed over, Aftercare initiated and Building Contract concluded</i>	
Active Building Outcomes for Stage 6	<ul style="list-style-type: none"> Active Building user manual completed Active Building data monitoring in place for optimised building operation, planned maintenance regimes, and predictive control strategies 	
Information Exchanges	<ul style="list-style-type: none"> <i>Feedback on Project Performance – Post Project Review</i>, including Lessons Learnt <i>Final Certificate</i> <i>Feedback from light touch Post Occupancy Evaluation (POE)</i> Building User Handbook 	

6 Handover

Further information:

Core Tasks: *Implement Facilities Management and Asset Management*

*Undertake **Post Occupancy Evaluation** of building performance in use*

*Verify **Project Outcomes** including **Sustainability Outcomes***

Note: Tasks identified here are those specific to Active Building projects, in addition to the Core Tasks

Key Considerations for Active Building	Core Active Building Tasks	Done
<ul style="list-style-type: none"> • Building Performance Evaluation (BPE) • Post Occupancy Evaluation (POE) • Impacts of adaptations, renovations, fit-out • Optimisation of systems 	Undertake BPE using installed monitoring equipment	
	Capture data in Active Building database and assess optimised performance of systems	
	Ensure O & M and building user manuals are kept up-to-date as necessary	
	Undertake Whole Life Cost reporting, based on LCC report, cost savings and any income generated from the sharing of energy with local and national grid networks	
	Develop/determine POE assessment method and undertake POE with building users and FMT	
	Ensure generation technologies are working effectively. Monitor generation against consumption – identify any unanticipated discrepancies and resolve	
	Ensure energy storage systems are working effectively.	
	Develop predictive control strategies to optimise use of energy storage in conjunction with energy generation and consumption, and electric vehicle charging	
	Ensure EV charging systems and controls are working effectively	
	Develop planned maintenance regimes to ensure technologies and equipment are working optimally	
Ensure Active Building requirements are included in all contractual documents related to the Active Building project		
Stage Outcome	<i>Building used, operated and maintained efficiently</i>	
Active Building Outcomes for Stage 7	<ul style="list-style-type: none"> • Active Building data monitoring is working effectively • Active Building technology is monitored and adapted as needed 	
Information Exchanges	<ul style="list-style-type: none"> • <i>Feedback from Post Occupancy Evaluation (POE)</i> • <i>Updated Building Manual including Health and Safety File and Fire Safety Information</i> • Life Cycle Cost (LCC) Report • Life Cycle Analysis (LCA) Report • Updated Active Building Database
